

Busbar color of distribution cabinet

Overview

It is typically implemented using a yellow-green copper bar or grounding strip. In engineering documentation and installation drawings, these conductors may all be classified under the busbar system but still require strict functional differentiation. Traditional panel wiring systems — referred to as block-and-cable systems — are designed around large power distribution blocks (PDBs) that require large parallel cables. Each PDB feeds a specific part of the control panel, which, as enclosures continue to require more power in service of. Inside every professionally built distribution cabinet, the neatly aligned **busbars—copper bars, conductor bars, or power distribution bars—**form the structural backbone of electrical energy transmission. Selection of the primary busbar: 2. Right Bus Bar is Red and Left Bus Bar is Black) and the Right Bar is Red so All Wiring at that side must be RED, WHITE & GREEN for all 120V - 15A or 20A.
