

Configuration inside the secondary distribution box

Overview

This document provides specifications, ordering information, illustrations, and application instructions for the various sizes of non-concrete and precast concrete enclosures used in PG&E electric underground secondary distribution. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. The primary function of the D-box is to direct the effluent to multiple drain lines, ensuring that the wastewater is evenly. ACS takes the basic idea of zone wiring and combines it with pre-cut, pre-tested cable and plug-in connectors, to provide power and telecommunication systems that can be installed under raised floors (The Intelligent Floor), or in accessible ceilings (The Intelligent Ceiling).
