

## Distribution Box Matching Calculation Rules

### Overview

The National Electrical Code (NEC) contains sufficient rules and requirements that apply to box fill calculation requirements. Most of these requirements can be found in Article 314 (Outlet, Device, Pull, and Junction Boxes; Conduit Bodies; Fittings; and Handhole Enclosures). Diagrams are like maps for your wires. Choose the correct circuit breaker for each load. 8 Example: Need a circuit for your 1,800W microwave?

Calculator Tip: Tools like Desmos' scientific calculator make light work of conversions. Electrical installations often require boxes for junctions and devices, which can lead to overcrowding if not. If not marked with its volume, a metal box divider or barrier shall be considered to take up  $\frac{1}{2}$  in 3. Code Change Summary: Code language was added to address box volume for a fixed barrier inside a box. You will learn to build a safe, efficient, and professional electrical system today.
