

## Do multi-module modules have separate electrical and optical ports

### Overview

An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host. SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables. Think of it as the “translator” for your network equipment, converting electrical signals into optical signals. An electrical port module, also known as an optical-to-electrical port converter module, is a hot-swappable device with an SFP form factor. It features an RJ45 connector and uses UTP cables as the transmission medium. com, we specialize in Cisco-compatible and NS Comm transceivers, offering enterprise customers tested, certified, and globally supported optical solutions. ) together with optical fibers.
