

## Fiber optic cable core interruption

### Overview

Fiber core damage and interruption caused by water ingress into the splice box at the optical fiber fusion point is the most common fault for partial fiber core interruption of the optical cable. Fiber break, broken fiber is divided into two types: partial interruption and the entire optical cable interruption. Partial interruptions are of the following categories: The first reason is that the fiber core is interrupted due to external force extrusion or excessive bending. During the. Fiber optic cables are the backbone of modern communications, delivering high-speed data over long distances with minimal loss. However, in real-world installations, whether underground, aerial, or in harsh industrial environments, fiber cables can and do fail.
