Ghana trough type

Overview

Ghana utilizes two primary plug types: Type D and Type G. Type D features three round pins arranged in a triangular pattern, while Type G has three rectangular pins, with the top pin being larger than the bottom two. Both types are commonly found throughout the country. The award-winning Farmer's Kit is tailor-made to meet the needs of the small to medium scale farmers in enabling them access to affordable, modern agricultural technologies, methods and inputs of the highest standard. To this end, the use of improved feed trough was demonstrated in three communities in Northern Ghana, namely Duko and. The IDT design has higher and narrower flutes which creates deeper drainage valves. It is a deep square fluted profile designed as side cladding or roofing material in commercial, industrial and residential buildings. Through action research and development partnerships, Africa RISING is creating opportunities for.
