High and low voltage complete sets of equipment are being shipped out

Overview

These products are highly integrated, compact in size, structurally compact, safe and reliable in operation, easy to maintain, and portable. In distribution systems, they can be used in ring network distribution systems as well as in dual power supply or radial terminal distribution. High voltage and low voltage complete sets occupy a significant place in modern electrical engineering as they are responsible for safe, secure, and efficient power distribution to all types of industries. The switchgear mainly consists of two parts: the cabinet body and the removable circuit breaker handcart. It is the core component of the power system, so it is responsible for the control, protection and isolation of circuits and equipment, and is also used to regulate power flow, quickly cut off. Complete set of high and low voltage electrical equipment As an important type of electrical device, complete sets of electrical equipment belong to the category of electrical equipment, similar to switches, contactors, circuit breakers, and transformers, but they have distinct integrated. The DFW series high-voltage cable tap boxes are widely used for node connections in 35kV, 25kV, and 10kV cable systems. They are the primary electrical equipment used to collect and distribute power after it exits the switchgear.
