How to configure a switch with an optical modem

Overview

In this tutorial, we'll show you how to set up a network with a switch and a modem. If you have multiple devices that need to connect to the internet, such as computers, printers, game consoles, and more, this setup will allow you to distribute the connection efficiently. This Article Applies to All GPON OL T Products and all Omada Switches with optical ports. They have the following demands in this example. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly. A passive optical network (PON) or Gigabit Passive Optical Network (GPON) is a point-to-multipoint (P2MP) network that uses a combination of active transmission equipments and passive cable components to provide network connectivity to end user's devices. This network is suitable for building. An ONU (Optical Network Unit) is a device located at the end-user's premises in a passive optical network (PON). Its primary function is to terminate the fiber optic line, convert the optical signal transmitted from the OLT (Optical Line Terminal) at the service
