When you run out of space in your service panel, a subpanel is the best solution. Use these tips from a master electrician to install one safely.

These days, many houses also have a secondary breaker panel, commonly called a subpanel. This setup — two power-distribution centers — offers real advantages in some situations.

In residential applications, three wires (i.e. Black as Hot 1, Red as Hot 2 and White as Neutral) enters the main panel to provide 120V and 240V single phase supply voltage.
