

How to quote a price for distribution boxes and circuit breakers

Overview

Typical per-breaker costs range from \$5 to \$25 for standard units, plus installation labor if add-ons are required. A mini formula note: $\text{data_formula} = \text{labor_hours} \times \text{hourly_rate}$. Key price variables include amperage, panel type, and wiring complexity. In this article, we'll explore the essential elements of a transparent quote, walk through the steps to create one, and show how quote software can make your job easier. Gone are the days when a hand-drawn estimate on paper could impress potential clients. While creating a detailed, professional. This guide covers everything from building a price book to presenting quotes that win jobs without leaving money on the table. Average markup 30-50% on materials. Key factors: job complexity, permits required. Whether you're quoting a panel upgrade for a new build or wiring a multi-unit commercial space, the numbers on your estimate aren't just guesses—they're the difference between staying profitable and bleeding hours on change orders. Key cost drivers include panel amperage, indoor vs outdoor location, wiring length, and whether a full panel upgrade or rerouting is needed.
