

How to replace a PLC-type optical splitter

Overview

Learn how to choose the right fiber optic splitter for FTTH and FTTX deployments. Compare PLC splitter ratios, packaging types, and installation options. Whether you're building a Passive Optical Network (PON) or upgrading existing infrastructure, understanding what a PLC Splitter is and how to choose the right one is crucial. What is a PLC Splitter?

How Does a PLC Splitter Work?

What is a PLC Splitter?

A PLC Splitter (Planar Lightwave Circuit). According to the Broadband Forum, PLC splitters are essential for achieving scalable and cost-effective GPON and XGS-PON deployment in access networks. In this guide, you'll learn how fiber splitters function in PON networks, the difference between PLC and FBT types, and how to choose the best. FS PLC Fiber Optic Splitters, Bare/Blockless/ABS/LGX Splitter/Rack Mount Types, support 1xN light distribution, with low IL and PDL for high-reliability transmission. Deploying

compact FS PLC Splitters to simplify your networks, perfectly fits your PON, EPON, FTTX, etc. By dividing a single optical signal from a central Optical Line Terminal (OLT) into multiple outputs for Optical Network Terminals (ONTs) at users' homes, splitters eliminate the need for dedicated fibers to each residence—slashing infrastructure costs while scaling network reach. Pick the split ratio that matches what you need.

How to replace a PLC-type optical splitter

In this blog post, we'll explore the key factors to consider when choosing a fiber optical PLC splitter to ensure optimal performance and reliability for your network.

These devices enable more effective monitoring and management of optical networks. They are available as components, in our quick connect cassettes, or in custom modules and rack-mount ...

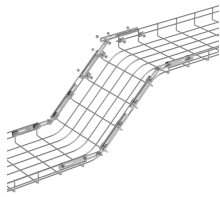

Learn everything about PLC Splitter: what they are, how they work, and how to source the right one for your network. Complete buyer's guide.

While both serve the same primary function, the technology behind them is different. The main alternative to PLC is the Fused Biconical Taper (FBT) splitter. The following table provides a ...

What Is a PLC Splitter? A PLC (Planar Lightwave Circuit) splitter is a high-precision passive optical component used to split one optical signal into multiple outputs in FTTH, GPON, and EPON ...

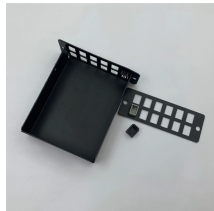

Learn how to choose the right fiber optic splitter for FTTH and FTTX deployments. Compare PLC splitter ratios, packaging types, and installation options.

Deploying compact FS PLC Splitters to simplify your networks, perfectly fits your PON, EPON, FTTX, etc.

This guide focuses on two critical aspects of optical splitters that define FTTH performance: split ratios (how signals are divided) and splitting architectures (how splitters are ...

A fiber optic splitter is a tool used to enable an optical fiber signal to be distributed across two or more fibers. On the other hand, PLC splitters are also referred to as Planar Waveguide Circuit ...

In this guide, you'll learn how fiber splitters function in PON networks, the difference between PLC and FBT types, and how to choose the best model for your rollout in 2025.
