Installation of a distribution box for a household in Bissau France

Overview

In this guide, we'll break down everything you need to know to install a distribution box correctly and confidently. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Check for proper IP/NEMA ratings and material quality. It takes the incoming power and safely distributes it to different circuits throughout your building. The house is on three levels, the attic rooms proved to be quite straight forward as a completely new set of power and lighting circuits could. Electrical equipment used in residential premises are commonly certified by third party ensuring conformity with the relevant standards. In this case, equipment shows the certification Mark of the certification body such as VDE, NF, AENOR, IMQ or others. Mark of conformity is a voluntary. Getting electricity in a new home in France requires three steps: an Enedis network connection (2–6 months, typically €400–€1,685 TTC), a CONSUEL compliance certificate (~€145 TTC), and an electricity supplier contract. This article mainly talks about the first one. Even better, get several photocopies of the plan so when all the lines and scribbling become to much you can start again! You are best preparing this plan although you will not be installing.
