Is high power a good thing for fiber optic routers

Overview

So the short answer is yes, you need a high-end router to take full advantage of gigabit internet. To reach the top speed of your gigabit fiber connection, you'll need a router that supports multi-gig internet speed and is compliant with the latest Wi-Fi standard. The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection. Is it okay or is there a need for concern that some problem with speed and latency will be faced soon?

It should be less than -27 dBm at all times otherwise you will have. Instead of using your old router, a high-performance Wi-Fi router designed for fiber optic internet will ensure you seamless streaming, online gaming, and remote work all over your space. However, the market is flooded with countless options, making the selection quite overwhelming.
