

## Leftover materials from optical cable construction

### Overview

This includes the cable sheaths, jackets, and cores, as well as the spools, reels, and boxes that are used for packaging and transportation. Nobody can do an estimate that's 100% accurate, and being careful to ensure you have enough components to finish the job is really important, especially in an era of supply chain uncertainties and long. From telecom upgrades and fiber rollouts to electrical rewiring and municipal streetlight projects, contractors handle thousands of feet of cable every year. When a job wraps up, crews often find themselves with piles of leftover copper or aluminum cable — sometimes mixed, sometimes damaged. BM-Rosendahl is the global supplier of production equipment for lead-acid and lithium-ion batteries. The portfolio ranges from solutions and equipment for enveloping, sleeving, wrapping & stacking, cast-on-strap to the assembly of automotive, motorcycle, industrial, and e-mobility batteries. That cable contains silicon dioxide – basically purified sand – which can live virtually forever if we give it a second chance. Unlike copper wiring that needs constant replacement, fiber optics are marathon runners of infrastructure.

## Leftover materials from optical cable construction

Some companies have machines to chop fiber optic cable into small bits, which is not easy considering the strength members used in the cable. It results in a material that can be used in ...
