

## Maximum bandwidth of fiber optic patch cords

### Overview

According to different transmission distances and bandwidth requirements, the products are divided into two categories: single-mode (OS2) and multi-mode (OM2, OM3, OM4, OM5), supporting high-speed network transmission from 1G to 400G/800G. This guide walks you through every variable that matters: fiber type, bandwidth rating, maximum distance, connector compatibility, and real-world deployment scenarios. By the end, you'll know exactly which cable type — OS2, OM3, OM4, or OM5 — belongs in your specific environment. Fiber Basics: Fiber-optic cable bandwidth determines how much data your network can handle, directly impacting business operations from video conferencing to file transfers. With modern fiber systems achieving up to 1. They are manufactured and tested in compliance with TIA 604 (FOCIS), IEC 61754 and YD/T industry standards.
