

Multimode Fiber Transmission Distance and Rate

Overview

Multimode fibers are categorized into OM1, OM2, OM3, OM4, and OM5, each with different bandwidth and distance capabilities. For example: OM1 and OM2: Support distances up to 300 meters at 1 Gbps. This characteristic makes MMF ideal for high-bandwidth applications over relatively short distances. Common applications include Local Area Networks. Fiber optic transmission distance varies based on fiber type, environmental conditions, and equipment selection. Due to the small core, only one optical mode is allowed to be transmitted. Multimode fibers (MMF) are designed for shorter-distance transmissions and are commonly used in local area networks (LANs) and data centers.

Multimode Fiber Transmission Distance and Rate

Contact Microsoft Support. Find solutions to common problems, or get help from a support agent.

Microsoft Support is here to help you with Microsoft products. Find how-to articles, videos, and training for Microsoft Copilot, Microsoft 365, Windows 11, Surface, and more.

The type, transmission rate, fiber material, and other factors affect the maximum transmission distance of fiber optic cable. This article also compares the maximum transmission ...

Multimode fibers are categorized into OM1, OM2, OM3, OM4, and OM5, each with different bandwidth and distance capabilities. For example: OM1 and OM2: Support distances up to ...

Welcome to the April 2026 edition of What's new in Microsoft 365 Copilot! Every month, we highlight new features and enhancements to keep Microsoft 365 admins up to date with Copilot features that ...

“OM” stands for optical multi-mode, a standard for multimode fiber to indicate the level of fiber. The bandwidth and maximum distance of different levels of transmission are different, and the ...

Today we're expanding model choice in Microsoft 365 Copilot with the addition of Anthropic's latest model—Claude Opus 4.7—now available in Copilot Cowork (Frontier) and Copilot ...

Get help and support for Microsoft Edge. Find Microsoft Edge support content, how-to articles, tutorials, and more.

This article explores the transmission distance limitations of multimode fibers across different transmission speeds, analyzes the key factors influencing these distances, and provides ...

Find help and how-to articles for Windows operating systems. Get support for Windows and learn about installation, updates, privacy, security and more.

Get help for the account you use with Microsoft. Find how to set up Microsoft account, protect it, and use it to manage your services and subscriptions.

Find out how to get support for Microsoft apps and services.

The performance of fiber cables—especially their transmission distance at different data rates—varies significantly across types. Below is a detailed guide to help you understand how ...

OM1 fiber can transmit data up to 33 meters at a data rate of 1 Gbps, while OM5 fiber can transmit data up to 550 meters at a data rate of 100 Gbps. This represents a more than 16-fold increase in ...

Building on our recent announcement of agentic capabilities in Word, today we are introducing the Legal Agent in Microsoft Word.

Today, we're expanding what Microsoft 365 Copilot can do with GPT-5.5 Thinking and ChatGPT Images 2.0 bringing stronger support for deeper analysis, multi-step work, and visual ...

Learn how fiber optic transmission distance varies between single mode vs. multimode fiber. Discover key factors affecting fiber distance, bandwidth, and cost to choose the right fiber for ...

Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Multi-mode links can be used for data rates up to 800 Gbit/s.

Equipped with a removable **Mounting Plate** inside the enclosure, enabling customized drilling and secure component mounting.

This guide covers the actual distance limits for OM3 and OM4 multimode fiber at every common data rate, what determines those limits, and when to stop fighting multimode and switch to ...

The maximum transmission distance for multimode fiber cable is around 550m at the speed of 10Gbps. It can transmit farther at lower data rates, such as going about 2km at 100Mb/s.
