Network Optical Control Module

Several core components are present inside a computer network. Discover how a computer network works, and explore the different network types and topologies.

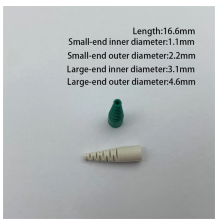

Learn exactly what a network is, which facilitates communication between users. Explore computer network components and types!

Computer networks are the technology interconnecting software, allowing you to do things like print a document from your laptop or send your business partner a signed contract over ...

GouMax Technology (GouMax) develops high-end optical components, modules and instruments for test and measurement solutions for next generation communication equipment and networks.

A computer network is defined as a system that connects two or more computing devices for transmitting and sharing information. This article explains computer network in detail, along with ...

Our optical networking product portfolio provides high-performance, reliable, and scalable optical control and power solutions to address high bandwidth and small form factor modules in both ...

Everything you need to build an optical network from end-to-end. Thin-film filter and PLC based AWG for multiplexing, a full suite of components for optical amplification use, optomechanical or MEMS-based ...

Overview This section provides details about the automation software components that manage, provision, monitor, and orchestrate Routed Optical Networking services. It introduces the ...

Networking basics like switches, routers, and wireless products help your business share applications, speed information access, and enhance customer service.

Explore the ultimate guide to optical modules. Learn types, functions, performance metrics & how to choose the right module for your fiber network.

In computer science, computer engineering, and telecommunications, a network is a group of communicating computers and peripherals known as hosts, which communicate data to other hosts ...

Through proprietary and patented coherent detection and sub-GHz wavelength accuracy, the HR-OCM from Coherent features highly accurate power monitoring independent of adjacent channel power ...

A network is a group of two or more computers or other electronic devices that are interconnected for the purpose of exchanging data and sharing resources.

An unparalleled selection of OSM modules are available to support the many network type monitoring applications using the RFTS-400 such as dark fiber monitoring, in-service monitoring, PON ...

A network is a collection of computers, servers, mainframes, peripherals, or other devices connected to facilitate communication and data sharing. Essentially, it is a system that ...

A network consists of nodes such as computers, servers, routers, and switches that send or receive data. These nodes are connected through links, which may be wired (cables, optical fiber) ...

Networking, or computer networking, involves connecting two or more computing devices (for example, desktop computers, laptops, mobile devices, routers, applications) to enable the transmission and ...

© 2026 Indzawo Optic Connect - All rights reserved

	Build high-performance and power-efficient optical modules for wireless, data center and communication applications with our optical networking ICs. Our products simplify designs by integrating ...
	Cisco Optical Network Controller - Technical support documentation, downloads, tools and resources
	The RFTS-400 modular platform design incorporates an Optical Control Module (OCM) and Optical Switching Modules (OSM) that support fiber monitoring expansion from 8 to 108 ports in the 1U rack. ...
