Network cabinet power tripped

High operating temperatures can also cause the circuit breaker to trip. Check that the ambient temperature where the PDU is installed is within the specified range.

To restore power, press the ''Reset'' button on the tripped GFCI outlet. Before doing so, ensure that the ''Test'' button works properly, to verify the functionality and reliability of the GFCI outlet.

So, what to do when power out in one room breaker not tripped? The first step is to find the cause of the issue. Such as a circuit breaker failure, short ...

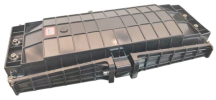

A power breaker trip shuts power to a circuit and can signal other problems. Learn how to reset a tripped breaker, its causes, and long-term fixes.

If the power does not come on after you flip the breaker and turn it back on, the circuit could be overloaded or it could have a short in it. Short circuits can lead to potential fire hazards and ...
