No communication between ports on the aggregation switch

All static port channels (that are not running LACP) remain in this mode. If you attempt to change the channel mode to active or passive before enabling LACP, the device displays an error ...

Collisions might occur if the duplex setting on the switch port and host is mismatched or if a legacy hub device or host NIC is connected to a switch. Other types of interface errors might ...

Troubleshooting: When LACP (Link Aggregation Control Protocol) or static LAG (Link Aggregation Group) is not functioning properly, common troubleshooting steps and checkpoints ...

To allow port aggregation, the basic configuration on all the ports must be consistent. The following list details the basic configuration parameters that should be consistent on all the ports: STP ...

Verify LAG (Link Aggregation Group) of a Juniper Networks EX Series switch is UP and troubleshoot it if it is not. To verify a Physical Interface (non-aggregated) or a VLAN interface, refer to ...

Virtual Stacking provides centralized management of switch ports. Unlike traditional stacking, virtually stacked switches do not require a physical connection, can be in different physical ...

To successfully aggregate ports on a UniFi switch, ensure that your switch model supports Link Aggregation Control Protocol (LACP) or static port channels, as available.

The customer wanted 25G ports between his buildings and went with the pro aggregation switches and some SFP28 modules (ESR (300m). The modules are detected but the link is not coming up.

I have a few USW-AGGREGATION switches (the 8 port version) and sadly when I create 2 aggregate groups, containing 2 ports each, I seem to run into an issue when I create a 3rd ...

Through this case study, we''ll dissect why switch aggregation ports demand surgical precision in configuration—and how to avoid becoming the next cautionary tale.
