

Optical Module Gray Scale Test

Overview

Color & Gray Level Test Targets measure the level of an imaging system's color or grayscale performance. On a Computer screen at a distance of 30-50 cm under normal desktop working light conditions, read the numbers in each of the 25 boxes. Count how many of. Gray uniformity refers to how consistently your display shows gray colors across the entire screen. Continuously adjustable 4-64 grey levels precisely simulate grey discrimination at. International standards focused on inspection and non-destructive testing (NDT) require that visual acuity and colour perception of personnel shall be periodically verified. The requirement for contrast sensitivity in grey scale was introduced only recently. Ideal for medical, industrial, au Imatest ColorGray 44 Color and Grayscale Test Target (Transmissive) Overview.
