The combiner box must fit all the strings in your system. A string is a series of solar panels connected in sequence. Common configurations in commercial solar farms include: The design depends on inverter input capacity and DC system architecture. Modern. When designing photovoltaic installations, few decisions carry as much long-term impact as properly sizing your solar combiner box. This critical junction point collects multiple PV strings into a single, higher-current output—and undersizing it today can force expensive equipment replacement when. To determine the size of a solar combiner box, check key factors.
