

Pipeline Cable Detection

Pipeline Cable Detection

Teledyne Marine's Pipe and Cable Detection Systems are advanced subsea survey solutions designed to locate, track, and assess the condition of buried pipelines and cables.

By accurately identifying the location and depth of buried utilities, professionals significantly reduce the risk of injury to personnel from striking live electrical cables or gas lines. This ...

A comprehensive range of Cable Avoidance Tools helping professionals to drive best locating practice, to reduce the number of cable strikes, and to dig more safely.

Cable and pipe locator technology, which is composed of both a portable transmitter and hand-held receiver, is our primary method for locating underground utilities. We currently use a variety of ...

DNV is a leader in verifying distributed fibre-optic sensing (DFOS) systems for pipeline leak detection. These systems use light signals to measure temperature, strain, and acoustic events along a fibre ...

Using a 750 cps audio frequency and up to 100 volts of output, the PD Pipe & Cable Locator makes it easy to identify underground lines and defects—even in challenging soil or congested infrastructure ...

By utilizing a fiber optical cable as a sensor, this technology ensures early detection and accurate localization of events like pipeline leaks or external threats.

Designed with advanced detection modes and adaptable signal outputs, it empowers you to precisely track pipelines, accurately measure their depth, and reliably identify target lines with ease.

With the OptaSense pipeline leak detection system, the fiber-optic cable acts a fully distributed sensor that offers thousands of detection points along the entire pipeline, capable of pinpointing the location ...

Whether locating metallic pipelines, tracer wire on plastic pipe, buried communication cables, electrical lines, or difficult-to-find utility services, these locators help crews verify the correct utility path before ...
