

## Railway Optical Cable Termination

### Overview

Proper fiber optic termination is a crucial process for ensuring the reliability, performance, and long-term durability of any fiber optic network. Utilizing OCC's existing 600 series adapter plates, the DTC product family is based on a proven design that offers versatility and ease of use. Prysmian have developed new cable designs and materials to provide the latest in chemical and mechanical resistance, fire resistance, EMC behaviour and enhanced transmission capacity. We offer medium and low-voltage power cables, communication cables (also with optical fibre), and control and signal cables. A DIN-rail kit to terminate Fiber Optic single-mode or multi-mode cable in the EX-JB01 junction box. We terminate fiber optic cable two ways - with connectors that can mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear or with splices which create a permanent joint between the two fibers. With a compact size, it can be easily snapped onto the DIN rail without additional mounting.
