

SN Connector Upgrade Version and Performance Comparison

Overview

These compact connectors, each developed by leading innovators such as US Conec, Senko, and Sumitomo, are reshaping fiber cabling architecture in hyperscale and enterprise environments. But which one is right for your 800G deployment?

Let's explore their unique designs. The SN is ceramic-based fiber optic connector so compact and flexible that it can be utilized either as a Base-8 trunk solution, a Base-2 patching interface or as a Base-8 connection to next generation 200G, 400G, and 800G transceivers. SENKO's SN connector is a Very Small. A new generation of VSFF (Very Small Form Factor) connectors — MDC, SN, and CS — has emerged to meet the ever-increasing demand for density, accessibility, and scalability. The goal of this blog post is to take readers through everything they might want or need to know about SN® Connectors- we'll cover features and benefits so people can understand how it helps. Which VSFF connector truly fits real 800G duplex networks?

Same fibers. They may look similar on a slide deck. Other streamlined form

factors include LC (Lucent Connector) and MTP / MPO (multiple-fiber push-on/pull-off) connectors. One version of VSFF connectors is the SN connector.
