

Security devices in network security include

Overview

Network security devices are hardware or virtual appliances designed to protect computer networks from unauthorized access, data breaches, and cyberattacks. They include firewalls, intrusion prevention systems, VPN gateways, and other tools that safeguard data across network. Network security devices provide automated functionality that can help stop network-based cyberattacks. These devices act as barriers between the internal network and potential threats from the outside world. Below, we will explore seven key concepts: Firewalls.
