

Standards for Underground Optical Cable Construction

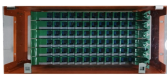

Overview

Underground fiber optic cable installation follows specific standards that govern burial depth, testing methods, installation techniques, and safety requirements. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up. In extreme cold climates, cables may need to be buried at greater depths where there temperatures are colder and frost penetrates to. Underground placement is necessary and unavoidable in certain areas for various reasons such as nature and heritage conservation, natural obstacles, aesthetics, space and safety. Underground utilities standards address safety and access rights, selection of the utility, and the continued maintenance of the utility once fiber has.
