

Technical Conditions for Acceptance of Primary Distribution Boxes

Overview

Distribution boxes must comply with UL 50 (enclosures) and UL 508A (industrial control panels) standards. These standards are rigorous about short-circuit current ratings (SCCR), proper wire sizing, and component compatibility. Effluent flow from a septic tank into two or more leach trenches for soil absorption. This document specifies the technical requirements for all customers requesting electric service at one of Pacific Gas and Electric Company's (PG&E) primary distribution voltages as defined in Rule 2. It is intended to give the customer a clear. This document may be stored in any type of electronic retrieval system provided BC Hydro is clearly indicated as the source and provided no profit accrues from such storage. Equipment that is to be returned to stock should meet the standard. Where product fails to pass acceptance activities, the procedures for control of nonconforming product must be implemented to include investigations where defined. If the acceptance records are not clear about how the product failed, then the manufacturer may end up duplicating the acceptance. The point of service shall be the Austin Energy (AE) line side cable termination in the pad mounted outdoor PRIMARY METERING CABINET(s) provided by the customer.

Technical Conditions for Acceptance of Primary Distribution Boxes

This specification shall govern, excepting as modified by the Drawings, Technical Conditions, or SMUD Civil Engineer. All construction work is subject to quality control, inspection, and testing under ...

The Customer shall provide, install, own, and maintain ALL equipment after the point of service including the Primary Metering Cabinet, load side primary cable, transformers, conduit, and pull boxes.

SEPTIC TANK EFFLUENT DISTRIBUTION BOXES INSTALLATION PROCEDURE AND APPROVED MODELS as Septic Tanks, Distribution Boxes, and Chamber Leaching Systems Approved for Use in ...

If the acceptance records are not clear about how the product failed, then the manufacturer may end up duplicating the acceptance activities in order to perform appropriate investigations.

In primary distribution substations, the main protective device for the installed equipment against overvoltages is the zinc oxide cap-less surge arresters. The selection of suitable surge arrester ...

Customer-owned primary service equipment and installations shall be technically compatible with the BC Hydro distribution system to ensure public safety and facilitate safe and reliable delivery of electrical ...

The main switch and sub-switches of the distribution box should be connected with copper bars (without bare wires) and meet the standard acceptance requirements.

Operator, Organizational, DS, GS, and Depot Maintenance Repair Parts and Special Tool Lists: Distribution Boxes J-1077/U and J-1077A/U. Army Equipment Record Procedures.

These instructions define the areas in which assistance may be given to a primary customer to coordinate the customer's and DTE Electric systems, to increase the operating safety of high voltage ...

The equipment shall successfully pass all the acceptance tests and routine tests referred to and those listed in the most recent edition of the standards given in this specification.

Design primary distribution system equipment installations with future periodic maintenance as a principal consideration. Equipment must be capable of removal from service while minimizing the ...

Section includes acceptance testing requirements for assessing the suitability for service and reliability of the power distribution system.

This document specifies the technical requirements for all customers requesting electric service at one of Pacific Gas and Electric Company's (PG& E) primary distribution voltages as defined in Rule 2.
