Overview

VLAN is created on the switch but in a down state. If it shows “down,” make sure there's at least one port that's identified as part of the specified VLAN, or a switch virtual interface in that VLAN. VLAN trunking issues SymptomIn order to find and fix connectivity problems caused by Virtual Local Area Networks (VLANs), VLAN troubleshooting entails a methodical approach to examining the setup and condition of network devices. Given that VLAN issues can impede host connectivity and proper network operation, this ability is.
