

## The relay protection device keeps beeping

### Overview

Without a device that suppresses, the surge in electricity will damage all of our electronic devices by a short circuit. A loose internal component or a malfunctioning circuit can cause a high-pitched noise from a surge protector. Take a look at the LED indicators (if any) and you should be able to quickly tell what the issue is about. When in doubt, always refer to the operational manual. Most surge. The protection device supervises its normal operation by executing various self-supervision checks during runtime of the device. The issue will be recorded in an internal memory. Over time, they might stop working, so it's important to look for signs like melted parts, strange heat, or buzzing sounds.
