Two-part four-tail fiber

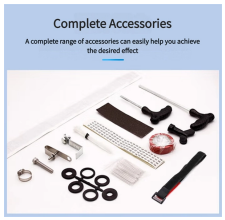

Overview

A fiber optic pigtail is a short, usually unjacketed, optical fiber cable that has a factory-installed connector on one end and a length of exposed fiber at the other. The connector end can be linked directly to network equipment, while the exposed end can be spliced to another fiber. OCC's fiber optic pigtail assemblies are designed for reliability and performance. All OCC pigtail assemblies may be ordered pre-terminated in any OCC rack or wall mount cabinet or custom configured for field installations. Either way, OCC's pigtail assemblies combine high-precision zirconia. Executive Summary: A fiber optic pigtail is one of the most commonly specified yet least understood components in structured cabling. Below are the features of these assemblies: Cable Diameter: 900um, 2mm, 3mm.
