

Underground Optical Cable Tunnel

Overview

A practical, engineering-focused guide to planning and installing underground fiber optic cables with the right cable structure, trench design and protection level for long-life, low-risk networks. 2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up. It forms a critical backbone for modern communication networks across both urban and rural environments. Match trench method with the correct underground fiber structure (GYTS, GYTA53, GYTY53, micro-duct). As a leading manufacturer of end-to-end fiber optic solutions, Weunion specializes in engineering. Often over looked, utilizing tunnel systems to deploy fiber optics, can provide last-mile and intra-city broadband pathways by providing immediate, cost-effective, and durable deployment routes without disrupting the municipality or mother nature.
