What are the uses of optical fiber network cards

Overview

Whether you're upgrading a workstation, scaling a small business network, or building out a hyperscale data center, a fiber network card (NIC, network interface card) is one of the most critical components for connectivity. Copper Ethernet NICs still have their place, but when bandwidth, distance. Small Form-factor Pluggable, or SFP, is a hot-swappable optical communication transceiver. Built with optical fiber technology, these networks use light pulses to transfer data over long distances, making them one of the fastest and most efficient means of. These cables transmit data through light signals using thin strands of glass or plastic. Unlike copper cables, fiber cables offer faster speeds, higher bandwidth, and smoother data transmission.
