

What does it mean to open a power fiber optic cable

Overview

Blowing fiber, also known as jetting, is when a machine is used to float fiber optic cable through the conduit run by using highly pressurized air to push it forward. While the set-up is more extensive, blowing fiber is great for long distances and can go thousands of feet. Just like "wire" which can mean lots of different things - power, security, HVAC, CCTV, LAN or telephone - fiber optics is not all the same. Since all these applications require different installation procedures, this section will focus on OSP installation in more detail. The Installation After the.
