What is a ZSY electrical distribution box

Overview

The Y-type ZY distribution box is made to guard against electrical risks from sparks. This is achieved through the presence of self-extinguishing characteristics of the components that make it up. It is suitable for places where risk factors include fire. It takes electricity from the main source and safely sends it to different circuits in a home, office, or industrial setup. The boxes also store protective equipment devices. Also known as a distribution board or breaker panel, it acts as the control hub, distributing power to different circuits and protecting them from overloads and faults.
