

What is the normal temperature for an outdoor electrical distribution box

Overview

A good rule of thumb for many enclosures is to keep the internal temperature below 95°F (35°C). It's a safe middle ground—cool enough for most equipment to run reliably, but not so cold that you're overpaying for cooling. Temperature inside the enclosure isn't always even. If it gets too hot, parts can stop working or even catch fire. You'll learn. An outdoor electrical distribution box (also called an outdoor distribution panel, load center, or panelboard enclosure) is a UL-listed assembly consisting of: 1. In fact, the physical changes that occur inside metal or plastic enclosures when exposed to prolonged exposure to intense sunlight and. Apart from exposure to all kinds of weather, the ambient temperature in summer is high and the effect of solar radiation must be considered.
