

Where is the router for fiber optic internet

Overview

The fiber is connected to an Optical Network Terminal (ONT) inside or outside your home. The ONT is linked to your router or gateway using an Ethernet cable. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Once the ONT is installed, the next step is to set up your router and configure the Wi-Fi network. The router connects to the ONT via an Ethernet cable, allowing you to access internet services including high-speed streaming, video conferencing, and cloud applications. Because it doesn't require any copper wiring, FTTH offers the fastest Internet speeds. Instead of modulating and demodulating analog signals.

Where is the router for fiber optic internet
