

## Which port should the pigtail of the fiber optic transceiver be plugged into

### Overview

The connector end plugs directly into active equipment, an ODF port, or a fiber splice tray, while the bare fiber end creates a low-loss permanent joint with the incoming cable. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. During the installation at the point where the fiber cable has to be plugged and/or unplugged you need to switch up your strategy and put a connector of some kind on. Fiber optic cable has gone through quite the evolution of connectors, and none of these connector styles are compatible with each. Just clear choices. A Fiber Patch cord connects two devices. You plug it into a switch, router, or patch panel. 1G/10G SFP+: Standard for Gigabit and 10 Gigabit Ethernet. Identify the SFP ports: Locate where the module will be installed on Cisco equipment by finding its SFP (Small Form-factor Pluggable) ports.
